TOOTENIMETUS	SOODUS	HIND
[illegible] combination lock, [illegible] 1360/110	51.80 ?	60.94 ?

The overlapping steel sleeves with 20 mm thickness surround the inner steel cable like a tough outer metal skin. Once the individually adjustable numerical code has been selected, you can securely lock your bike with the Steel-O-Flex™ Safe 1360 without a key. A special scanning protection makes it difficult to crack the numerical code by manipulation. At the same time, the embossing of the numbers on the roller is such that you can set the right combination even in the dark.
